# Introduction

The International Development Association (IDA) is one of the largest sources of assistance for the world's 75 poorest countries, 39 of which are in Africa. Overseen by 173 shareholder nations, IDA aims to reduce poverty by providing credits and grants for programs that boost economic growth, reduce inequalities, and improve people's living conditions.

The IDA Results Measurement System (RMS) tracks results in countries supported by IDA. The World Bank Group (WBG) introduced the RMS with the IDA13 Replenishment (July 2002) as a key reporting and accountability tool for tracking progress and reporting results achieved by IDA during each replenishment cycle. It was the first framework with quantitative indicators to monitor aggregate results established among multilateral development institutions.

The IDA RMS is a central part of the WBG's framework for tracking progress at an aggregate level and integral to the Bank's efforts to improve the focus on results. The IDA RMS is updated on an annual basis and publicly disclosed on IDA's website and the Bank's results page.

The IDA18 RMS uses a three-tiered development results framework with 84 indicators to track results of IDA countries at an aggregate level.

# Tier 1

## IDA Countries Progress Selected Highlights

### WBG GOALS

#### Poverty Line

#### Real Per Capita Income

### GROWTH

#### Annual Growth Rate Real GDP Per Capita

#### Youth Employment

### SUSTAINABILITY AND RESILIENCE

#### CO<sub>2</sub> Emissions in Metric Tons Per Capita

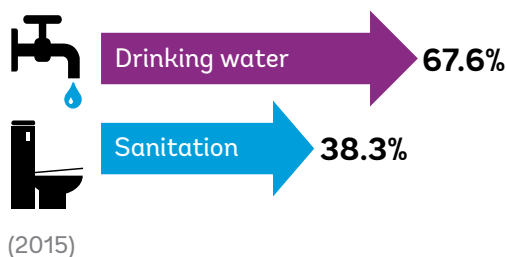

#### Countries Without Wealth Depletion

### INCLUSIVENESS

#### Population Using Basic Services

#### Lower Secondary Gross Completion Rate

# Tier 2

## IDA-Supported Development Results Selected Highlights

### GROWTH

#### Improved Agricultural Technology

**1.92 million**

Number of farmers adopting improved agricultural technology promoted by operations funded by IDA

(FY18)

#### Reach of Financial Services

**271,349**

Number of beneficiaries reached with financial services in operations funded by IDA

(FY18)

### SUSTAINABILITY

#### Disaster Risk Reduction Support

**39 countries**

Number of countries supported toward institutionalizing disaster risk reduction as a national priority with IDA support

(FY18)

#### Statistical Capacity Building Support

**44 countries**

Number of IDA countries provided with statistical capacity building support by WBG for the implementation of household surveys

(FY18)

### INCLUSIVENESS

#### Number of Children Immunized

**18,127,387 children**

<5 years of age who received vaccines purchased through an IDA-financed project or through other resources and delivered through an IDA-supported program

(FY18)

#### People Provided Access to Improved Basic Services

Water sources

**13.2 million**

Sanitation

**8.5 million**

(FY18)

# Tier 3

## IDA Organizational and Operational Effectiveness Selected Highlights

### DEVELOPMENT OUTCOME RATINGS

#### Satisfactory Outcomes of IDA Operations

**85.4% as a share of commitments**

Rated by the Independent Evaluation Group (IEG) as “moderately satisfactory” or higher, on a 3-year rolling basis

(Projects exiting in FY15–17)

### CLIENT FEEDBACK

#### IDA Countries on WBG Knowledge

**7.3 rating**

On an average rating scale of 1–10: “Overall, how significant a contribution do you believe the WBG’s knowledge work and activities make to development results in your country?”

(FY18)

### BENEFICIARY FEEDBACK

#### Beneficiary Feedback Indicator at Design

**94%**

IDA investment project financing operations for which at least one citizen engagement indicator is included in the results framework of the project appraisal document

(FY18)

### PORTFOLIO PERFORMANCE

#### Satisfactory Bank Performance in IDA-Financed Operations

**84.2% overall**

Rated by the Independent Evaluation Group (IEG) as “moderately satisfactory” or higher, on a 3-year rolling basis

(Projects exiting in FY15–17)

### IMPLEMENTATION OF SPECIAL THEMES

#### Facetime Index

**192,727 days per FY**

Professional World Bank staff presence on the ground in FCS countries

(FY18)

#### Gender Gaps Addressed

**56%**

IDA-supported operations that identify gender gaps and links them to actions supported by the project, with indicators in the results framework to track progress

(FY18)

## TIER 1: IDA Countries Progress

Tier 1 of the IDA18 RMS reports long-term development outcomes and the broader context of countries in which IDA operates. Progress in Tier 1 indicators is not directly attributed to IDA's interventions; it is the outcome of collective efforts by countries and their development partners. There are 33 indicators in Tier 1 tracking progress that IDA-eligible countries are making on development indicators, organized under four categories: (1) WBG goals of poverty eradication and boosting shared prosperity; (2) growth; (3) sustainability and resilience; and (4) inclusiveness.

Tier 1 aggregates data from the list of eligible IDA borrowers at the end of the previous fiscal year. This first update of Tier 1 indicators reports aggregated results from IDA's eligible borrowers as of June 30, 2018. Data from previous years, including baselines, have been retroactively adjusted due to improvements in data availability, coverage, and other changes.

| No.              | Indicator  | Unit of Measure                | Baseline<br>(as of June 30, 2017) |                          | Actual<br>(as of June 30, 2018) |                          |
|------------------|--|--------------------------------|-----------------------------------|--------------------------|---------------------------------|--------------------------|

## TIER 2: IDA-Supported Development Results

Tier 2 of the IDA18 RMS tracks development results in countries supported by IDA operations. Tier 2 indicators report on outputs supported directly by IDA projects, which are collected and aggregated from data extracted from project documents, i.e., Implementation Status and Results Reports (ISRs), Implementation Completion and Results Reports (ICRs), and Project Appraisal Documents (PADs). The majority of these indicators are Corporate Results Indicators (CRIs), a set of standard indicators monitored corporately and used to report World Bank, International Bank for Reconstruction and Development (IBRD), and IDA project results to internal and external constituents. There are 21 indicators in Tier 2 tracking aggregate project output indicators in three categories—(1) growth, (2) inclusiveness, and (3) sustainability—to reflect the link to the WBG strategy.

The methodology used for aggregating Tier 2 indicators (IDA-supported results) was adjusted<sup>1</sup> by calculating cumulative totals of outputs achieved during a period or adding up the values as we go or report on (i.e., “how much we have achieved so far”). Running totals will be generated and reported during the IDA18 cycle (i.e., FY18 data during the first year, FY18 and FY19 data in the second year, and FY18 through FY20 data in the third and final year of the IDA18 cycle). Therefore, results currently reported on Tier 2 correspond to results achieved by IDA-supported projects only during FY18.

The FY17 harmonized list for FCS (released in June 2017) has been used for aggregating and reporting results achieved during FY18 in these countries. The same list will be used throughout the IDA18 cycle to ensure data comparability and consistency across the years.

1. In the IDA17 RMS, reported outputs in Tier 2 were based on a three-year rolling basis.

2. Reflects the cumulative IDA-supported results achieved during the IDA17 cycle (FY15–17), unless noted otherwise. Several indicators developed for IDA18 have data available only for FY17.

3. The performance standard corresponds to the net cumulative value (or range) expected to be achieved by the end of the IDA18 period (i.e., June 30, 2020). Values shown are for all IDA countries; no standards have been established for FCS.

4. This indicator has been aligned—in terms of definition and target—with the IDA18 policy commitment to “support the addition of five GW in renewable energy generation,” and the RMS value is therefore reported for operations delivery as of the end of September 2018. Of the 6.0 GW reported, 0.8 GW were provided through direct financing; the additional 5.2 GW were supported through indirect financing.

5. Reflects the cumulative IDA-supported results achieved during the IDA17 cycle (FY15–17), unless noted otherwise. Most (new) indicators developed for IDA18 have data available only for FY17.

6. The performance standard corresponds to the net cumulative value (or range) expected to be achieved by the end of the IDA18 period (i.e., June 30, 2020). Values shown are for all IDA countries; no standards have been established for FCS.

7. Number of female beneficiaries are not included since these infrastructure services are normally provided to groups (e.g., at the community, household, or general population level) and data collected and reported are not disaggregated by sex at the client/beneficiary level.

## TIER 3: IDA Organizational and Operational Effectiveness

Tier 3 of the IDA18 RMS includes measures of both the operational and organizational effectiveness of IDA. This includes indicators tracking the performance of IDA's portfolio, the quality and timeliness of projects delivered to clients, the results orientation of the operations, client and beneficiary feedback, financial sustainability, and the implementation of the five IDA Special Themes. There are 30 indicators organized under six categories: (1) development outcome ratings; (2) client feedback; (3) beneficiary feedback; (4) portfolio performance; (5) financial sustainability; and (6) implementation of special themes. Similar to Tier 2, data reported for FCS is based on the FY17 harmonized list of FCS (released in June 2017) and will be used throughout the IDA18 cycle.

11. The baseline value reflects annual performance standards as of the end of FY17, unless noted otherwise. Data was not available for some new indicators developed for IDA18 RMS.

12. No data is available for part two of this composite indicator since IEG does not provide ratings in the CLR, measuring "how well the program was aligned with the corporate strategy."

13. To avoid skewed incentives for speed at the expense of project quality and necessary due diligence, performance of this indicator will be tracked and monitored on a regular basis without establishing specific target or performance standard.

n.a. = not available

## TIER 3: IDA Organizational and Operational Effectiveness (continued)

| No.                                     | Indicator   | Unit of Measure   | Benchmark value (Reported value as of end FY17)<br>All IDA/FCS <sup>14</sup> | Actual All IDA (FY18) | Actual FCS (FY18)                | Performance Standard         |

| 28                                      | Total private mobilization of WBG-supported operations/transactions in IDA countries  | US\$ billions   | n.a.   | 7.04                  | 2.97                             | Monitored                    |
| 29                                      | Number of Illicit Financial Flows (IFFs) assessments performed in IDA countries   | Number of IFF assessments   | 9/2  | 3                     | 0                                | 10–15                        |
| 30                                      | Share of IDA18 CPFs that reflect at least one of the following four key principles underpinning economic transformation: <ul style="list-style-type: none"> <li>• Sectoral productivity</li> <li>• Value chain expansion</li> <li>• Increased productive capital stock or investment in energy, transport, manufacturing or services</li> <li>• Export sector output/value added; trade facilitation</li> </ul> | %   | n.a.   | 75                    | -                                | Monitored                    |

14. The baseline value reflects annual performance standards as of the end of FY17, unless noted otherwise. Data was not available for some new indicators developed for IDA18 RMS.

15. This indicator is a vestige of the previous system which was based on the number of completed operations, focusing only on a tally of numbers and not on results. Since the new Gender Tag methodology has been introduced in FY17, only a handful operations have closed at end of FY18 (only 3 out of 9 gender-tagged operations) and none has a completed ICR in the system.

n.a. = not available

# Definitions of Indicators

## TIER 1: IDA COUNTRIES' PROGRESS

**1. Population living on less than US\$1.90 (2011 PPP) a day:** Percentage of the world population living on less than US\$1.90 a day at 2011 international prices. Aggregation is average, weighted by the total population. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                      |   |
|----------------------|---|
| Unit of measure:     | Percentage  |
| Disaggregation:      | FCS   |
| Reporting frequency: | Annual (available annual data varies by country)                |
| Data source:         | World Bank staff estimates calculated using data from PovcalNet |

**2. Growth rate of real per capita income of the bottom 40%:** Median of the annualized growth rates of average real per capita income (or consumption) of the bottom 40% of client countries' population. This growth rate refers to the annualized growth rate of real per capita income (or consumption) of the poorest 40% of the population for each country, measured over an approximate reporting period (e.g., circa 2010–15). Selection of income or consumption follows the World Bank's Global Poverty Monitoring (PovcalNet). This median is calculated from annualized growth rates from IDA countries that have household survey data for the reporting period. Countries that lack survey data from this period are excluded from the index calculation.

|                      |   |
|----------------------|---|
| Unit of measure:     | Percentage  |
| Disaggregation:      | FCS   |
| Reporting frequency: | Annual  |
| Data source:         | Global database of Shared Prosperity using the latest available PovcalNet data within various reporting windows (e.g., circa 2007–12) |

**3. Annual growth rate of real GDP per capita:** Annual percentage growth rate of GDP per capita based on constant local currency. Aggregates are based on constant 2010 U.S. dollars. GDP per capita is gross domestic product divided by midyear population. GDP at purchaser's prices is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                      |                              |
|----------------------|------------------------------|
| Unit of measure:     | Percentage                   |
| Disaggregation:      | FCS                          |
| Reporting frequency: | Annual                       |
| Data source:         | World Development Indicators |

**4. GDP per person employed:** GDP per person employed is GDP divided by total employment in the economy. Purchasing power parity (PPP) GDP is GDP converted to 2011 constant international dollars using PPP rates. An international dollar has the same purchasing power over GDP that a U.S. dollar has in the United States. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                      |                              |
|----------------------|------------------------------|
| Unit of measure:     | Constant 2011 PPP \$         |
| Disaggregation:      | FCS                          |
| Reporting frequency: | Annual                       |
| Data source:         | World Development Indicators |

**5. Non-agriculture sectors, value added:** Net output of non-agriculture sectors as percentage of GDP, calculated as subtracting agriculture value added (as percentage of GDP) from 100. The non-agriculture sectors refer to the industry and services sectors. Industry corresponds to the International Standard Industrial Classification (ISIC) divisions 10–45 and comprises value added in mining, manufacturing (also reported as a separate subgroup), construction, electricity, water, and gas. Services correspond to ISIC divisions 50–99 and include value added in wholesale and retail trade (including hotels and restaurants), transport, and government, financial, professional, and personal services such as education, health care, and real estate services. Also included are imputed bank service charges, import duties, and any statistical discrepancies noted by national compilers as well as discrepancies arising from rescaling. Value added is the net output of a sector after adding up all outputs and subtracting intermediate inputs. It is calculated without making deductions for depreciation of fabricated assets or depletion and degradation of natural resources. The origin of value added is

determined by the ISIC, revision 3. Note: For countries that report value added in the national accounts at basic prices, gross value added at factor cost is used as the denominator. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                      |   |
|----------------------|---|
| Unit of measure:     | Percentage  |
| Disaggregation:      | FCS   |
| Reporting frequency: | Annual  |
| Data source:         | World Bank staff estimates using data from World Development Indicators |

**6. Level of statistical capacity** Statistical capacity indicator provides an overview of the statistical capacity of developing countries. It is based on a diagnostic framework developed with a view to assessing the capacity of national statistical systems using metadata information generally available for most countries, and monitoring progress in statistical capacity building over time. The framework has three dimensions: statistical methodology; source data; and data periodicity and timeliness. For each dimension, a country is scored against specific criteria, using information available from the World Bank and other international agencies. A composite score for each dimension and an overall score combining all three dimensions are derived for each country on a scale of 0–100. A higher score indicates a higher level of capacity. Aggregation is un-weighted average. Data are from the Data on Statistical Capacity portal site. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                      |  |
|----------------------|--|
| Unit of measure:     | Scale from 0 to 100  |
| Disaggregation:      | FCS  |
| Reporting frequency: | Annual   |
| Data source:         | Data on Statistical Capacity ( <a href="http://datatopics.worldbank.org/statisticalcapacity">http://datatopics.worldbank.org/statisticalcapacity</a> ) |

**7. Trade Logistics Performance Index** Logistics Performance Index overall score reflects perceptions of a country's logistics based on efficiency of customs clearance process, quality of trade- and transport-related infrastructure, ease of arranging competitively priced shipments, quality of logistics services, ability to track and trace consignments, and frequency with which shipments reach the consignee within the scheduled time. The index ranges from 1 to 5, with a higher score representing better performance. Data are from Logistics Performance Index surveys conducted by the World Bank in partnership with academic and international institutions and private companies and individuals engaged in international logistics. Respondents evaluate eight markets on six core dimensions on a scale from 1 (worst) to 5 (best). The markets are chosen based on the most important export and import markets of the respondent's country, random selection, and, for landlocked countries, neighboring countries that connect them with international markets. Scores for the six areas are averaged across all respondents and aggregated to a single score using principal components analysis. Aggregation is unweighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                      |                                  |
|----------------------|----------------------------------|
| Unit of measure:     | Average rating (1=low to 5=high) |
| Disaggregation:      | FCS                              |
| Reporting frequency: | Biennial                         |
| Data source:         | World Development Indicators     |

**8. Number of IDA countries that have raised taxes/GDP above 15%** Tax revenue in local currency divided by GDP in local currency. The indicator is a key measure of domestic resource mobilization in IDA countries. The indicator (and threshold of 15%) was established by the IMF in consideration of: (i) close to half of LICs still have tax below 15% of GDP; (ii) empirical evidence shows that once the tax-to-GDP level reaches 12.75%, real GDP per capita increases sharply and in a sustained manner over several years; (iii) 15% is the threshold for resources needed for an effective state.

|                      |  |
|----------------------|--|
| Unit of measure:     | Number                                     |
| Disaggregation:      | FCS  |
| Reporting frequency: | Annual                                     |
| Data source:         | IMF WEO database; OECD Tax Statistics; GFS |

**9. No. of IDA countries that have an improved composite PEFA score** In dimensions across the pillars of budget reliability, transparency of public finances, and control in budget execution:

- (1.1) Aggregate expenditure outturn
- (9.1) Public access to fiscal information
- (24.2) Procurement methods

The 3 dimensions selected represent 3 important elements of PFM performance from 3 different pillars of the PEFA methodology: budget reliability; transparency of public finances; and predictability and control in budget execution. The baseline score for each country would be the numerated value of the average scores of the three dimensions for the most recent PEFA assessment. For example, A=4, B=3, C=2, D=1 and NU/NR=0. Annual calculation of the progress would be calculated as follows:

**Significant improvement = 2 points**

- At least 2 of the 3 indicators show improvement in scores
- At least 2 of the 3 indicators keeps the same score "A" or "B"
- At least 1 of the indicators keeps the scores "A" or "B" plus at least 1 of the indicators improves

**Improvement = 1 point**

- At least one of the indicators improves or keeps the same score "A" or "B" and the others do not change.

**No improvement Negative movement, and no change in D or C scores = 0 points**

- Negative change
- All other options except the mentioned above under significant improvement and improvement

|                     |                  |
|---------------------|------------------|
| Unit of Measure     | Number           |
| Disaggregation      | FCS              |
| Reporting frequency | Annual           |
| Data source         | PEFA Sekretariat |

**10. Youth employment to population ratio (ages 15–24):** The youth employment-to-population ratio is the proportion of a country's population of ages 15–24 that is employed. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | Sex; FCS                     |
| Reporting frequency | Annual                       |
| Data source         | World Development Indicators |

**11. Countries without wealth depletion:** Percentage of IDA countries with positive or zero changes in wealth per capita, based on a country's Adjusted Net Savings (ANS), which indicates a country's ability to sustain income and welfare for its (growing) population in the future. ANS is based on gross national savings adjusted for changes in all assets: physical (i.e. depreciation of fixed capital), human (e.g., education expenditure), and natural capital (i.e., mineral, energy, and forest depletion), and accounting for the wealth-diluting effects of population growth. Data reported for IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |  |
|---------------------|--|
| Unit of Measure     | Percentage   |
| Disaggregation      | FCS  |
| Reporting frequency | Annual   |
| Data source         | World Bank staff estimates based on The Changing Wealth of Nations |

**12. Population exposed to harmful air pollution (PM 2.5):** Percent of population exposed to ambient concentrations of PM2.5 that exceed the WHO guideline value is defined as the portion of a country's population living in places where mean annual concentrations of PM2.5 are greater than 10 micrograms per cubic meter, the guideline value recommended by the WHO as the lower end of the range of concentrations over which adverse health effects due to PM2.5 exposure have been observed. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |  |
|---------------------|--|
| Unit of Measure     | Percentage                               |
| Disaggregation      | FCS                                      |
| Reporting frequency | Annual                                   |
| Data source         | World Bank; World Development Indicators |

**13. Average annual deforestation change:** Permanent conversion of natural forest area to other uses, including shifting cultivation, permanent agriculture, ranching, settlements, and infrastructure development. Deforested areas do not include areas logged but intended for regeneration or areas degraded by fuelwood gathering, acid precipitation, or forest fires. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |  |
|---------------------|--|
| Unit of Measure     | Percentage                               |
| Disaggregation      | FCS                                      |
| Reporting frequency | Irregular                                |
| Data source         | World Bank; World Development Indicators |

**14. CO<sub>2</sub> emissions:** CO<sub>2</sub> emissions are those stemming from the burning of fossil fuels and the manufacture of cement. They include CO<sub>2</sub> produced during consumption of solid, liquid and gas fuels and gas flaring. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |  |
|---------------------|--|
| Unit of Measure     | Metric tons per capita                   |
| Disaggregation      | FCS                                      |
| Reporting frequency | Irregular                                |
| Data source         | World Bank; World Development Indicators |

**15. Annual freshwater withdrawals:** Annual freshwater withdrawals refer to total water withdrawals, not counting evaporation losses from storage basins. Withdrawals also include water from desalination plants in countries where they are a significant source. Withdrawals can exceed 100% of total renewable resources where extraction from nonrenewable aquifers or desalination plants is considerable or where there is significant water reuse. Withdrawals for agriculture and industry are total withdrawals for irrigation and livestock production and for direct industrial use (including withdrawals for cooling thermoelectric plants). Withdrawals for domestic uses include drinking water, municipal use or supply, and use for public services, commercial establishments, and homes. Data are for the most recent year available for 1962–2014. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | FCS                          |
| Reporting frequency | Irregular                    |
| Data source         | World Development Indicators |

**16. Countries with growth concentrated in the bottom 40%:** Percentage of countries (with available data) for which growth in average (mean) real per capita income of the bottom 40% is positive and greater than growth in average (mean) real per capita income of the total population. Growth rates are annualized (compound annual growth rate) over a time interval of roughly five years. The growth rate of the bottom 40% of the population of a country for year T is the average annual growth rate measured over a period of (roughly) five years leading up to (or close to) year T.

|                     |  |
|---------------------|--|

**17. Proportion of population with access to electricity:** The percentage of the population that has access to electricity. Electrification data are collected from industry, national surveys and international sources. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |

| Unit of Measure     | Percentage                   |
| Disaggregation      | FCS                          |
| Reporting frequency | Irregular                    |
| Data source         | World Development Indicators |

**18. Proportion of adults (15 years and older) with an account at a bank or other financial institution or with a mobile money service provided** This indicator denotes the percentage of respondents who report having an account (by themselves or together with someone else) at a bank or another type of financial institution; having a debit card in their own name; receiving wages, government transfers, or payments for agricultural products into an account or through a mobile phone at a financial institution in the past 12 months; paying utility bills or school fees from an account at a financial institution in the past 12 months; receiving wages or government transfers into a card in the past 12 months; or personally using a mobile phone to pay bills or to send or receive money through a GSM Association (GSMA) Mobile Money for the Unbanked (MMU) services in the past 12 months (% age 15+). Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                        |
|---------------------|------------------------|
| Unit of Measure     | Percentage             |

| Reporting frequency | Triennial              |
| Data source         | Global Findex Database |

**19. Ratio of female to male labor force participation rate:** The percentage of female to male labor participation rate. Labor force participation rate is the proportion of the population ages 15 and older that is economically active: all people who supply labor for the production of goods and services during a specified period. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | FCS                          |
| Reporting frequency | Annual                       |
| Data source         | World Development Indicators |

**20. Legal changes that support gender equality over the past two years:** This indicator measures the number of legal gender differences increasing gender parity over a two year period. The indicator covers legal changes taking place in the following seven indicators as measured by the Women, Business and the Law dataset: accessing institutions; using property; getting a job; providing incentives to work; going to court; building credit; and protecting women from violence. Aggregation is sum. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                                     |
|---------------------|-------------------------------------|
| Unit of Measure     | Number                              |
| Disaggregation      | FCS                                 |
| Reporting frequency | Biennial                            |
| Data source         | Women, Business and the Law dataset |

**21. Lower secondary gross completion rate:** The lower secondary gross completion rate is measured as the gross intake ratio to last grade of lower secondary education. This is calculated as the number of new entrants in the last grade of lower secondary education, regardless of age, divided by the population at the entrance age for the last grade of lower secondary education. Data limitations preclude adjusting for students who drop out during the final year of lower secondary education. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

**Ratio of girls' to boys' completion rate:** This indicator is defined as the ratio of the female gross completion ratio to the male gross completion ratio in lower secondary education.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | Sex; FCS                     |
| Reporting frequency | Annual                       |
| Data source         | World Development Indicators |

**22. Lower secondary gross enrollment rate:** Gross enrollment ratio is the ratio of total enrollment, regardless of age, to the population of the age group that officially corresponds to the level of education shown. Secondary education completes the provision of basic education that began at the primary level, and aims at laying the foundations for lifelong learning and human development, by offering more subject- or skill-oriented instruction using more specialized teachers. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

**Ratio of girls' to boys' enrollment rate:** This indicator is defined as the ratio of the female gross enrollment ratio to the male gross enrollment ratio in secondary education.

|                     |                              |

| Reporting frequency | Annual                       |
| Data source         | World Development Indicators |

**23. Under-5 mortality rate:** The probability of a child born in a specific year or period dying before reaching the age of 5 years, if subject to age-specific mortality rates of that period, expressed per 1000 live births. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |  |
|---------------------|--|
| Unit of Measure     | Number of deaths per 1,000 live births |
| Disaggregation      | FCS                                    |
| Reporting frequency | Annual                                 |
| Data source         | World Development Indicators           |

**24. Prevalence of stunting among children under 5 years of age:** Prevalence of stunting is the percentage of children under age 5 whose height for age is more than two standard deviations below the median for the international reference population ages 0–59 months. For children up to two years old height is measured by recumbent length. For older children height is measured by stature while standing. The data are based on the WHO's new child growth standards released in 2006. Aggregation is linear mix-effect model estimates. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

| Reporting frequency | Every five years             |
| Data source         | World Development Indicators |

**25. Proportion of births attended by skilled health personnel:** Births attended by skilled health staff are the percentage of deliveries attended by personnel trained to give the necessary supervision, care, and advice to women during pregnancy, labor, and the postpartum period; to conduct deliveries on their own; and to care for newborns. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |

| Reporting frequency | Irregular                    |
| Data source         | World Development Indicators |

**26. Incidence of HIV:** Percentage of new HIV infections among uninfected population ages 15–49. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | FCS                          |
| Reporting frequency | Annual                       |
| Data source         | World Development Indicators |

**27. Maternal mortality ratio:** Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births. The data are estimated with a regression model using information on the proportion of maternal deaths among non-AIDS deaths in women ages 15–49, fertility, birth attendants, and GDP. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |   |
|---------------------|---|

| Disaggregation      | FCS   |
| Reporting frequency | Annual  |
| Data source         | World Development Indicators                      |

**28. Adolescent fertility rate:** Adolescent fertility rate is the number of births per 1,000 women ages 15–19. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |   |
|---------------------|---|
| Unit of Measure     | Number of births per 1,000 women ages 15–19 |
| Disaggregation      | FCS   |
| Reporting frequency | Annual                                      |
| Data source         | World Development Indicators                |

**29. Contraceptive prevalence by modern methods:** Contraceptive prevalence rate is the percentage of women who are practicing, or whose sexual partners are practicing, at least one modern method of contraception. It is usually measured for women ages 15–49 who are married or in union. Modern methods of contraception include female and male sterilization, oral hormonal pills, the intra-uterine device, the male condom, injectables, the implant (including Norplant), vaginal barrier methods, the female condom, and emergency contraception. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | FCS                          |
| Reporting frequency | Irregular                    |
| Data source         | World Development Indicators |

**30. People using basic sanitation services:** People using basic sanitation services refers to the percentage of people using at least basic sanitation services, that is, improved sanitation facilities that are not shared with other households. This indicator contains people using basic sanitation services as well as safely managed sanitation services. Improved sanitation facilities include flush/pour flush to piped sewer systems, septic tanks or pit latrines; ventilated improved pit latrines; composting toilets; or pit latrines with slabs. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | FCS                          |
| Reporting frequency | Annual                       |
| Data source         | World Development Indicators |

**31. People using basic drinking water services:** People using basic drinking water services refers to the percentage of people using at least basic water services. This indicator contains people using basic water services as well as safely managed water services. Basic drinking water services means drinking water from an improved source, provided collection time is not more than 30 minutes for a round trip. Improved water sources include: piped water, boreholes or tubewells, protected dug wells, protected springs, and packaged or delivered water. Aggregation is weighted average. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                              |
|---------------------|------------------------------|
| Unit of Measure     | Percentage                   |
| Disaggregation      | FCS                          |
| Reporting frequency | Annual                       |
| Data source         | World Development Indicators |

**32. Number of refugees by country or territory of asylum:** Refugees are people who are recognized as refugees under the 1951 Convention Relating to the Status of Refugees or its 1967 Protocol, the 1969 Organization of African Unity Convention Governing the Specific Aspects of Refugee Problems in Africa, people recognized as refugees in accordance with the UNHCR statute, people granted refugee-like humanitarian status, and people provided temporary protection. Asylum seekers—people who have applied for asylum or refugee status and who have not yet received a decision or who are registered as asylum seekers—are excluded. Palestinian refugees are people (and their descendants) whose residence was Palestine between June 1946 and May 1948 and who lost their homes and means of livelihood as a result of the 1948 Arab-Israeli conflict. Country of asylum is the country where an asylum claim was filed and granted. Aggregation is sum. Data is reported for all IDA eligible countries, including blend countries, in a reporting fiscal year.

| Data source         | World Development Indicators |

**33. Internally displaced persons, total displaced by conflict and violence:** Internally displaced persons are defined according to the 1998 Guiding Principles (<http://www.internal-displacement.org/publications/1998/ocha-guiding-principles-on-internal-displacement>) as people or groups of people who have been forced or obliged to flee or to leave their homes or places of habitual residence, in particular as a result of armed conflict, or to avoid the effects of armed conflict, situations of generalized violence, violations of human rights, or natural or human-made disasters and who have not crossed an international border. "People displaced" refers to the number of people living in displacement as of the end of each year, and reflects the stock of people displaced at the end of the previous year, plus inflows of new cases arriving over the year as well as births over the year to those displaced, minus outflows which may include returnees, those who settled elsewhere, those who integrated locally, those who travelled over borders, and deaths.

## TIER 2: IDA-SUPPORTED DEVELOPMENT RESULTS

**1. Farmers adopting improved agricultural technology:** This indicator measures the number of farmers of the project who have adopted an improved agricultural technology promoted by operations funded by IDA.

- **Farmers** are people engaged in farming activities or members of a farming business (disaggregated by men and women) targeted by the project.
- **Adoption** refers to a change of practice or change in use of a technology that was introduced/promoted by the project.
- **Technology** includes a change in practices compared to currently used practices or technologies (seed preparation, planting time, feeding schedule, feeding ingredients, postharvest storage/processing, etc.). If the project introduces or promotes a technology package in which the benefit depends on the application of the entire package (e.g., a combination of inputs such as a new variety and advice on agronomic practices such as soil preparation, changes in seeding time, fertilizer schedule, plant protection, etc.), this counts as one technology.

|                     |                                     |
|---------------------|-------------------------------------|
| CRI                 | Yes                                 |
| Unit of Measure     | Number (in millions <sup>16</sup> ) |
| Disaggregation      | Sex; FCS                            |
| Reporting frequency | Annual                              |
| Data source         | ISRs                                |

**2. Beneficiaries reached with financial services:** The indicator measures the number of beneficiaries reached with financial services in operations funded by IDA.

- **Beneficiaries** include people, micro-enterprises, and small- and medium-sized enterprises (SMEs).
- **Financial services** include transaction accounts, deposit accounts, mobile money accounts, loans, lines of credit, housing finance, micro-insurance, agri-insurance, etc. Financial services vary widely and Task Team Leaders usually use the exact wording for the type of services offered by their projects, so there are many different customized indicators in the system; this means that manual aggregation is the only way to report results on this indicator.

|                     |                      |
|---------------------|----------------------|
| CRI                 | Yes                  |

| Reporting frequency | Annual               |
| Data source         | ISRs; ICRs           |

**3. Roads constructed or rehabilitated** The indicator measures the number of kilometers of all roads constructed, reopened to motorized traffic, rehabilitated, or upgraded by operations supported by operations funded by IDA. This includes rural and non-rural roads.

- **Rural roads** are functionally classified in various countries below Trunk or Primary, Secondary or Link roads, or sometimes Tertiary roads. Such roads are often described as rural access, feeder, market, agricultural, irrigation, forestry, or community roads. Typically, rural roads connect small urban centers/towns/settlements of less than 2,000 to 5,000 inhabitants to each other or to higher classes of roads, market towns, and urban centers.
- **Non-rural roads** are roads functionally classified in various countries as Trunk or Primary, Secondary or Link roads, or sometimes Tertiary roads. Typically, non-rural roads connect urban centers/towns/settlements of more than 5,000 inhabitants to each other or higher classes of road, market towns, and urban centers. Urban roads are included in non-rural roads.

| Data source         | ISRs; ICRs |

**4. Area provided with new/improved irrigation or drainage services:** The indicator measures in hectares the total area of land provided with new or improved irrigation or drainage services in operations funded by IDA. This includes (i) the area provided with new irrigation or drainage services (ha), and (ii) the area provided with improved irrigation or drainage services (ha).

- **Irrigation or drainage services** refers to the better delivery of water to, and drainage of water from, arable land, including better timing, quantity, quality, and cost-effectiveness for the water users.
- **New irrigation or drainage services** refers to the provision of irrigation and drainage services in an area that has not had these services before. The area is not necessarily newly cropped or newly productive land, but is newly provided with irrigation and drainage services, and may have been rain-fed land before.
- **Improved irrigation or drainage services** refers to the upgrading, rehabilitation, and/or modernization of irrigation or drainage services in an area with existing irrigation and drainage services.

| Reporting frequency | Annual     |
| Data source         | ISRs; ICRs |

16. FCS data is in thousands.

**5. Generation capacity of renewable energy:** The indicator measures in Gigawatts (GW), the generation capacity of renewable energy enabled through policy and investment lending operations, technical assistance, leveraged finance of partners, enabling infrastructure development (transmission and distribution, grid integration), and guarantees to scale-up private sector investment.

- **Renewable power generation** refers to the following: biomass co-generation; wind; geothermal; solar; wave and tidal; and hydro power generation of any capacity

Note: This indicator has been aligned—in terms of definition and target—with the IDA18 policy commitment to “support the addition of five GW in renewable energy generation,” and RMS value is therefore reported for operations delivery as of the end of September 2018. Of the 6.0 GW reported, 0.8 GW were provided through direct financing; the additional 5.2 GW were supported through indirect financing.

**6. Private investments catalyzed by the World Bank in IDA countries:** Private sector investment resulting from the World Bank's involvement in a transaction, operation or non-financing activity. Includes investments made as a result of an operation after it is completed. Includes Total Private Mobilization. Data of IDA-funded operations is reported.

|                     |                               |
|---------------------|-------------------------------|

| Disaggregation      | FCS                  |
| Reporting frequency | Annual               |
| Data source         | ISRs                 |

**8. People who have received essential health, nutrition, and population services:** The indicator measures the sum of the number of children immunized, the number of women and children who have received basic nutrition services, and the number of deliveries attended by skilled health personnel, through operations funded by IDA.

- **Number of children immunized** refers to the number of children 5 years of age and younger receiving vaccines purchased through an IDA-financed project, as well as the number of children immunized with vaccines purchased with other resources (i.e., GAVI or government funds) that are delivered through an IDA-supported program. It captures the number of children immunized and not the number of vaccination; that is, if the same child is immunized with multiple vaccines on the same day or has several immunization visits in a given year, the child will be counted only once. Thus, simply tallying the monthly totals of the number of children receiving vaccines, as recorded in immunization registers or health management information systems, will lead to double counting. Since contribution rather than attribution is to be measured, pro-rating based on proportion of IDA financing is not required.
- **Women and children who have received basic nutrition services** refers to the total beneficiaries reached by any of the following services: direct feeding programs (supplementary feeding for pregnant and lactating women and infants and young children under age 5); programs promoting appropriate infant and young child feeding (e.g., promotion/support for exclusive breastfeeding, adequate and timely introduction of complementary foods); nutrition programs for adolescent girls, including nutrition education, micronutrient supplements, etc., delivered through school health/nutrition programs or other programs reaching adolescent girls; provision of micronutrient supplements to pregnant/lactating women and children under 5 including vitamin A, iodine, iron/iron folic acid, supplemental zinc, and multiple micronutrient powders; food fortification (e.g., iodized salt); deworming; monitoring of nutritional status; nutrition and food hygiene education; nutrition components of early childhood development programs; home gardens and small livestock production for improved dietary diversity; targeted emergency food aid and treatment of severe acute and moderate acute malnutrition. Although the same individuals could receive more than one of the above services, they should be counted only once.
- **Number of deliveries attended by skilled health personnel** refers to the number of women who delivered with the assistance of a skilled health provider (specialist or non-specialist doctor, midwife, nurse, or other health personnel with midwifery skills), whether in health facilities or women's homes. If the World Bank-financed activities are mainly at health facilities, the data for this indicator can be obtained from delivery records or health management information systems. If the IDA-financed activities include supporting skilled health providers to provide home deliveries, efforts should be made to accurately record such home deliveries in addition to the institutional deliveries.

**9. Beneficiaries of social safety net programs:** This indicator measures the number of individuals benefiting from safety nets programs supported by IDA. Safety nets programs are designed to provide social assistance to poor and vulnerable individuals or families by including them in cash transfers (conditional and unconditional), public works and workfare programs, fee waivers for services, and in-kind assistance to address critical needs (e.g., food, medicine, shelter, and social services).

| Data source         | ISRs; ICRs           |

**10. People provided with access to improved water sources:** This indicator measures the cumulative number of people who benefited from improved water supply services that have been constructed through operations supported by IDA. This includes people newly provided with access to improved water sources and does not include people benefiting from rehabilitation works.

- **Improved water sources** include piped household connections (house or yard connections) and community water points (public standpipes, boreholes, protected dug wells, and protected spring and rainwater collection). It does not include water provided through tanker trucks or vendors; unprotected wells or unprotected springs; surface waters (such as rivers, ponds, dams, lakes, streams, and irrigation channels); or bottled water. The definition of "improved water sources" follows the UNICEF-WHO Joint Monitoring Program definition.

**11. People provided with access to improved sanitation services:** This indicator measures the cumulative number of people who benefited from improved sanitation facilities that have been constructed through operations funded by IDA. This includes people newly provided with access to improved sanitation facilities and does not include people benefiting from rehabilitation works.

- **Improved sanitation facilities** includes flush or pour-flush to a piped sewer system, septic tank, or pit latrine; ventilated improved pit latrine; pit latrine with slab; and composting toilet. It does not include flush or pour-flush to elsewhere (i.e., not to a piped sewer system, septic tank, or pit latrine); pit latrine without slab/open pit; bucket; hanging toilet or hanging latrine; shared facilities of any type; or no facilities, bush, or field. The definition of "improved sanitation facilities" follows that of the UNICEF-WHO Joint Monitoring Program.

**13. People provided with new or improved electricity service:** The indicator measures the number of people that have received new or improved electricity service through operations funded by IDA. The indicator includes direct, inferred and improved access to electricity services supported by operations funded by IDA.

- **Direct access** is measured as the number of people that benefited from new grid or off-grid household or community electricity services.
- **Inferred access** is measured as the number of people that benefited from the increased generation capacity, a proportion of whose output is reasonably estimated to be powering new household connections.
- **Improved electricity** is the additional electricity available for households with an existing connection to the grid. Additional electricity allows households to go beyond their current level of electricity service.

| Data source         | ISRs                 |

**14. Beneficiaries in IDA countries of job-focused interventions:** Number of beneficiaries reached by jobs-relevant interventions in operations supported by IDA. The indicator captures the cross-cutting nature of the jobs agenda, as beneficiaries (disaggregated by gender) may be individuals, workers, households, farmers, micro-enterprises, SMEs, and other target groups that benefit from WBG-supported operations in different sectors and types of operations. The Jobs group encourages the use of the indicator directly in the results framework and supports operational teams by providing data collection templates, training manuals and other resources through the Jobs M&E Toolkit. The indicator is a composite indicator, and in addition to being used as a standalone indicator, it aggregates values from the following CRIs for corporate reporting: (1) farmers reached with agricultural assets and services; (2) beneficiaries of labor market programs; (3) firms benefiting from private sector initiatives; (4) teachers recruited or trained; (5) students benefiting from direct interventions to enhance learning (TVET and tertiary learning only); and (6) beneficiaries reached with financial services.

| Data source         | WBG SAP              |

**15. Projected energy or fuel savings:** The indicator measures energy savings and lifetime fuel savings, both converted to megajoules (MJ), achieved through energy efficiency measures that are directly attributable to operations funded by IDA. This indicator aggregates the following data: project life time energy savings, projected lifetime fuel savings, and projected electricity generation savings.

- **Projected savings** are calculated against baseline or business-as-usual scenario in the absence of the project.
- **Savings** are defined as savings for the lifetime of the intervention projected in the year it is completed.

**16. Countries supported toward institutionalizing disaster risk reduction as a national priority with IDA support:** Number of countries with IDA-supported programs that contribute to ensuring that disaster risk management is a national priority with a strong institutional basis for implementation in alignment with Sendai. This includes, among other things, support toward national policy and legal frameworks; dedicated and adequate resources; community participation; and national multi-sectoral platforms for disaster risk reduction.

| Reporting frequency | Annual  |
| Data source         | World Bank staff estimates based on active operations |

**17. Net greenhouse gas emissions:** Project net greenhouse gas (GHG) emissions are calculated as an annual average of the difference between project gross (absolute) emissions aggregated over the economic lifetime of the project and the emissions of a baseline (counterfactual) scenario aggregated over the same time horizon. The indicator applies to operations that are subject to GHG accounting under the corporate mandate. This includes IBRD/IDA investment lending in Sustainable Development Global Practices (Energy & Extractives, Transport & ICT, Environment & Natural Resources, Social, Urban, Rural and Resilience, Water, and Agriculture) where agreed GHG accounting methodologies exist. The indicator is based on an ex-ante estimation performed during project preparation using World Bank-approved GHG accounting methodologies. The indicator value is negative if the project is reducing emissions, and positive if the project is increasing emissions. Net GHG emissions at the portfolio level are calculated as sum of project net emissions. GHG accounting is only done ex-ante. If the project undergoes major restructuring or is subject to additional financing relevant to GHG accounting, the ex-ante estimation of project net emissions needs to be recalculated at the time of restructuring or processing additional financing. Data of IDA-funded operations is reported. Net GHG emissions are reported for the entire projects regardless of the share of IBRD or IDA financing.

**18. Number of IDA countries that were provided statistical capacity building support by WBG for the implementation of household surveys:** Refers to technical assistance activity provided to national statistical agencies related to household surveys (e.g., sampling, survey logistics, estimation of poverty-lines). Data is reported for IDA eligible countries, including blend countries, in a reporting fiscal year.

**21. Number of IDA countries that operationalize the OGP:** The OGP is a multilateral initiative that aims to secure concrete commitments from governments to promote transparency, empower citizens, fight corruption, and harness new technologies to strengthen governance. In the spirit of multi-stakeholder collaboration, OGP is overseen by a Steering Committee including representatives of governments and civil society organizations. The World Bank will support countries participating in OGP and those interested in taking actions to become eligible. The Bank will be notified for every instance an IDA Country formally accepts entry into the Open Government Partnership. The Bank tracks and documents the support provided by each of these countries and report on a yearly basis. When countries have projects with an OGP component, it means that they are performing actions required for Open Government membership. The countries must agree to these projects, so they are agreeing to Bank support and the reforms that go with it. Therefore, if they are implementing at least one component, then they are on a path to Open Government membership and are defined as operationalizing the agenda commitments.

## TIER 3: IDA ORGANIZATIONAL AND OPERATIONAL EFFECTIVENESS

**1. Satisfactory outcomes of IDA country strategies:** Percentage of Country Assistance Strategy (CAS) and/or Country Partnership Framework (CPF) Completion Reports rated moderately satisfactory, satisfactory or highly satisfactory by the Independent Evaluation Group (IEG). Data is reported for CAS of IDA eligible countries, including blend countries, during the CAS period.

|                     |   |
|---------------------|---|
| Unit of Measure     | Percentage, IEG rating  |
| Disaggregation      | FCS   |
| Reporting frequency | Annual (four-year rolling, based on projects exiting during the last four fiscal years) |
| Data source         | IEG   |

**2. Satisfactory outcomes of IDA operations:** Share of IDA operations and IDA commitments rated by IEG as moderately satisfactory or higher on achievement of outcomes. Data are for projects exiting in the three previous fiscal years for which at least 60% of the projects for each fiscal year have been evaluated by IEG. The rating captures the extent to which a project's original or formally revised development objectives were achieved. The rating is based on three criteria: (i) relevance of the objectives and design (relevance); (ii) extent to which the objectives were achieved (efficacy); and (iii) extent to which the operation achieves a higher rate of return than the opportunity cost of capital, or is able to provide a similar economic justification (efficiency).

|                     |   |
|---------------------|---|
| Unit of Measure     | Percentage, IEG rating  |
| Disaggregation      | FCS   |
| Reporting frequency | Annual (three-year rolling, based on projects exiting during the last three fiscal years) |
| Data source         | IEG   |

**3. Client feedback in IDA countries on WBG effectiveness and impact on results:** Mean score for the answer provided by WBG clients in IDA countries to the following questions from the annual WBG Country Opinion Survey (COS) Program: (a) "Overall, please rate your impression of the WBG's effectiveness in your country." and (b) "To what extent does the WBG's work help to achieve development results in your country?" (based on a 10-point scale with 1 being "not effective at all" or "to no degree at all", and 10 being "very effective" or "to a

very significant degree"). WBG clients in IDA countries are defined as respondents who report in the COS that they collaborate with the World Bank (IDA). The indicator reflects the reporting fiscal year ratings, i.e., for one-third of all WBG client countries surveyed during each three-year cycle. Data is reported for IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                                 |
|---------------------|---------------------------------|
| Unit of Measure     | Average rating 1=low to 10=high |
| Disaggregation      | FCS                             |
| Reporting frequency | Annual                          |
| Data source         | WBG COS Program                 |

**4. Client feedback in IDA countries on WBG knowledge:** Mean score for the answer provided by WBG clients in IDA countries to the question from the annual WBG COS Program: "Overall, how significant a contribution do you believe the WBG's knowledge work and activities make to development results in your country?" (based on a 10-point scale with 1 being "not significant at all", and 10 being "very significant"). WBG clients in IDA countries are defined as respondents who report in the COS that they collaborate with the World Bank (IDA). The indicator reflects the reporting fiscal year ratings, i.e., for one-third of all WBG client countries surveyed during each three-year cycle. Data is reported for IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                                 |
|---------------------|---------------------------------|
| Unit of Measure     | Average rating 1=low to 10=high |
| Disaggregation      | FCS                             |
| Reporting frequency | Annual                          |
| Data source         | WBG COS Program                 |

**5. Client feedback on WBG on responsiveness and staff accessibility:** Mean score for the answer provided by WBG clients in IDA countries to the following questions from the annual WBG COS Program: "To what extent is the WBG an effective development partner in your country, in terms of (a) responsiveness, and (b) staff accessibility?" (based on a 10-point scale with 1 being "to no degree at all", and 10 being "to a very significant degree"). WBG clients in IDA countries are defined as respondents who report in the COS that they collaborate with the World Bank (IDA). The indicator reflects the reporting fiscal year ratings, i.e., for one-third of all WBG client countries surveyed during each three-year cycle. Data is reported for IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |                                 |
|---------------------|---------------------------------|
| Unit of Measure     | Average rating 1=low to 10=high |
| Disaggregation      | FCS                             |
| Reporting frequency | Annual                          |
| Data source         | WBG COS Program                 |

**6. Client feedback on WBG on collaboration with other donors:** Mean score for the answer provided by WBG clients in IDA countries to the question from the annual WBG COS Program: "To what extent is the WBG an effective development partner in your country, in terms of collaboration with other donors and development partners?" (based on a 10-point scale with 1 being "to no degree at all", and 10 being "to a very significant degree"). WBG clients in IDA countries are defined as respondents who report in the COS that they collaborate with the World Bank (IDA). The indicator reflects the reporting fiscal year ratings, i.e. for one-third of all WBG client countries surveyed during each three-year cycle. Data is reported for IDA eligible countries, including blend countries, in a reporting fiscal year.

| Disaggregation      | FCS             |
| Reporting frequency | Annual          |
| Data source         | IDA CPF reviews |

**10. Alignment with the strategy:**

**Stock of country strategies underpinned by a Systematic Country Diagnostic (SCD):** Percentage of the stock of WBG country strategies underpinned by an SCD. Data aggregated for CPFs for IDA eligible countries during CPF period, including blend countries.

|                     |                                   |
|---------------------|-----------------------------------|
| Unit of Measure     | Percentage                        |
| Disaggregation      | FCS                               |
| Reporting frequency | Annual (three-year rolling basis) |
| Data source         | WBG CPF reviews                   |

**Qualitative assessment of alignment of the country engagement with the corporate goals:**

|                     |        |
|---------------------|--------|
| Unit of Measure     | TBD    |
| Disaggregation      | FCS    |
| Reporting frequency | Annual |
| Data source         | IEG    |

**11. Disbursement ratio:** Ratio of disbursements during the fiscal year to the undisbursed balance at the beginning of the fiscal year for IDA investment project financing projects. The disbursement ratio is not targeted at the corporate level. There is instead a corporate standard based on historical experience.

|                     |                |
|---------------------|----------------|
| Unit of Measure     | Percentage     |
| Disaggregation      | FCS            |
| Reporting frequency | Annual         |
| Data source         | World Bank SAP |

**12. Operations design drawing lessons from evaluative approaches:** Operations design drawing lessons from evaluative approaches (%): Share of operations approved in a reporting fiscal year that document lessons learned—from Impact Evaluations, IEG reviews of ICR Reports, or such other analytical and evaluative documents e.g., Public Expenditure Reviews (PER), Country Financial Accountability Assessments (CFAA)—and reflect them in the project design. Includes IDA, Global Environment Facility (GEF), large Recipient-executed Trust Fund (RETF), Special Financing and Montreal Protocol. Data of IDA-funded operations is reported.

|                     |  |
|---------------------|--|
| Unit of Measure     | Percentage                                     |
| Disaggregation      | FCS  |
| Reporting frequency | Annual   |
| Data source         | PAD; project papers; program documents reviews |

**13. Quality of M&E in IDA-financed operations:** This indicator measures percentage of the net-commitment amount of the closed IDA projects reviewed by IEG that are rated “Substantial” or “High” on quality of Monitoring and Evaluation, against the total net-commitment amount of the closed IDA projects reviewed by IEG in a three-year rolling basis.

|                     |   |
|---------------------|---|
| Unit of Measure     | Percentage IDA commit, IEG ratings                            |
| Disaggregation      | FCS   |
| Reporting frequency | Annual (three-year rolling basis)                             |
| Data source         | World Bank Management Information System (Business Warehouse) |

**14. Time from project Concept Note to the first disbursement of project financing:** Number of months from Concept Note approval to the First Disbursement for IDA projects that have either obtained Board approval, or become effective (defined as when a project has met pre-determined conditions), or had a first disbursement during the previous 12 months. The total time from concept note to first disbursement is calculated by summing the mean for all investment project financing in IDA projects that have reached the respective milestones during the previous 12 months: (i) Time from Concept Note approval to Board Approval; (ii) Time from Board Approval to Project Effectiveness; and (iii) Time from Project Effectiveness to First Disbursement. Data of IDA-funded operations is reported.

|                     |                |

| Unit of Measure     | Months         |
| Disaggregation      | FCS            |
| Reporting frequency | Annual         |
| Data source         | World Bank SAP |

**15. Average cost of IDA supervision projects (implementation support):** Average cost of supervision, based on costs posted directly to operational projects in the IDA portfolio, divided by the monthly average number of projects in the IDA portfolio, plus the weighted average share of Safeguards, Fiduciary and Procurement costs posted to internal orders for these projects over three fiscal years.

|                     |                   |
|---------------------|-------------------|
| Unit of Measure     | US\$ in thousands |
| Disaggregation      | FCS               |
| Reporting frequency | Annual            |
| Data source         | World Bank SAP    |

**16. Number of impact evaluations supported by the World Bank in IDA countries:** This indicator reports the number of newly initiated impact evaluations of Bank operations in IDA countries in a reporting fiscal year. Data is calculated based on the report from the ASA dashboard as well as reports from Trust Funds including Development Impact Evaluation (DIME), Strategic Impact Evaluation Fund (SIEF), Gender Innovation Lab, and Health Results Innovation Trust Fund. Data is reported for IDA eligible countries, including blend countries, in a reporting fiscal year.

|                     |  |
|---------------------|--|
| Unit of Measure     | Number   |
| Disaggregation      | FCS  |
| Reporting frequency | Annual   |
| Data source         | Various World Bank Trust Fund units; ASA dashboard |

**17. Proactivity index:** The ratio of projects in “actual” problem status 12 months ago that have had a proactivity action in the last 12 months divided by the total number of problem projects from 12 months ago. After being downgraded to MU or lower for DO and/or IP, a project needs to have one of the following actions taken within the next 12 months, otherwise it will be considered a proactivity problem. The actions are upgrade, close, cancel  $\geq 20\%$ , suspend, or restructuring (both level 1 and level 2) (note: restructurings for extensions of closing dates or reallocations are not counted as proactivity actions unless they are combined with other actions). Data of IDA-funded operations is reported.

| Unit of Measure     | Percentage  |
| Disaggregation      | None  |
| Reporting frequency | Annual  |
| Data source         | IDA financial statements and Expenditure and Revenue Statements |

**19. World Bank budget to portfolio volume ratio (IDA):** Total administrative budget per US\$ billion portfolio under supervision (US\$ millions)

|                     |  |
|---------------------|--|
| Unit of Measure     | US\$ millions  |
| Disaggregation      | None   |
| Reporting frequency | Annual   |
| Data source         | World Bank financial statements and Expenditure and Revenue Statements |

**20. Percentage of IDA-supported projects that demonstrate a results chain by linking gender gaps identified in analysis to specific actions that are tracked in the results framework:** Percentage of IDA-supported operations that identify specific gaps between women and men, boys and girls and links them to specific actions supported by the project, with indicators in the results framework to track progress, based on projects approved in the current fiscal year.

|                     |            |
|---------------------|------------|
| Unit of Measure     | Percentage |
| Disaggregation      | FCS        |
| Reporting frequency | Annual     |
| Data source         | PAD        |

**21. Percentage of IDA-supported operations reporting gender results at completion:** Percentage of IDA supported operations that report at completion the extent to which the operation had or is expected to have a positive/negative/neutral impact on gaps between males and females. Based on a review of IDA-supported operations that closed during the current fiscal year and that had been tagged for addressing gender aspects in analysis, design, and M&E. Data is aggregated for all IDA eligible countries (including “Inactive” and “Blend” countries) in a reporting fiscal year.

|                     |            |
|---------------------|------------|
| Unit of Measure     | Percentage |
| Disaggregation      | FCS        |
| Reporting frequency | Annual     |
| Data source         | ICR        |

**22. Number of IDA-supported operations that address and respond to gender-based violence (GBV):** Number of operations that have identified GBV as an issue in the design phase and have responded with mitigating actions throughout the operation. Based on IDA-funded projects approved in current fiscal year.

|                     |        |
|---------------------|--------|
| Unit of Measure     | Number |
| Disaggregation      | FCS    |
| Reporting frequency | Annual |
| Data source         | PAD    |

**23. Facetime index in FCS:** The Facetime index shows professional (GE+) staff presence on the ground in FCS per FY, measured as a percent increase from the FY17 baseline. It is calculated in total number of days and then converted to an index where the baseline (FY17) is 100. Facetime is calculated once per FY, on a full-year basis, and captures the following components: (i) days of GE+ World Bank staff based in FCS at end of FY (assumed number of days per year 220 x number of staff); (ii) days paid for GE+ STCs (local and international) based in FCS during the full FY; and (iii) mission days, during full FY, from non-FCS to FCS for GE+ Staff and STCs, who are not based in FCS.

The Facetime index is calculated and reported in two ways:

- Based on the respective FY FCS Harmonized List (all countries)
- Based on the frozen FY17 FCS Harmonized List<sup>17</sup> (IDA/Blend countries) + 4 RMR (Risk Mitigation Regime) countries: Nepal, Niger, Guinea, Tajikistan.

|                     |   |
|---------------------|---|
| Unit of Measure     | Number of days per FY (converted to an index where the baseline FY17 figure is 100) |
| Disaggregation      | NA  |
| Reporting frequency | Annual  |
| Data source         | BI HR reports and analysis for office travel data                                   |

**24. IDA-supported operations with climate change co-benefits:** The indicator measures the number of projects during the reporting FY and total dollar amount of IDA commitments from investment project financing identified as providing climate change co-benefits. Development activities are considered to provide climate change co-benefits when they contribute to climate change adaptation and/or mitigation, even when adaptation and/or mitigation is not their primary development objective. In other words, an activity can provide adaptation and/or mitigation co-benefits both when climate change is among its stated objectives or is integrated into the project's components. The World Bank SAP tracks lending commitments with climate change co-benefits at the time of project approval in dollar terms, not the volume of emission reductions or increased climate resilience resulting from the operation.

- **Adaptation** co-benefits are defined as are the results of an activity that specifically intends to reduce risks from increasing climate variability or the vulnerability of human or natural systems to the impacts of climate change by maintaining or increasing adaptive capacity and resilience.
- **Mitigation** is defined as an activity that provides mitigation co-benefits if it either reduces GHG emissions into the atmosphere or enhances their removal from the atmosphere. Reductions are measured against a "no-project" baseline, and, similar to adaptation, the assessment is based on information in the project's appraisal and/or supporting documents.

|                     |  |
|---------------------|--|
| Unit of Measure     | Number   |
| Disaggregation      | FCS  |
| Reporting frequency | Annual   |
| Data source         | World Bank SAP, PADs and/or supporting documents |

|                     |  |
|---------------------|--|
| Unit of Measure     | US\$ billion                                     |
| Disaggregation      | FCS  |
| Reporting frequency | Annual   |
| Data source         | World Bank SAP, PADs and/or supporting documents |

**25. Completed Advisory Services and Analytics (ASA) products that address climate change issues:** This indicator reports the number of ASA completed in IDA countries during the reporting FY that promote adaptation, mitigation, or both through diagnostic and policy advice, new data and tools, and knowledge management. Data is reported for IDA eligible countries, including blend countries, in a reporting FY.

|                     |  |
|---------------------|--|
| Unit of Measure     | Number   |
| Disaggregation      | FCS  |
| Reporting frequency | Annual   |
| Data source         | World Bank staff estimates based on Bank data system |

**26. IDA \$ commitments with disaster risk management co-benefits:** This indicator measures the dollar value of the sum approved by the Board in a given FY, to be extended to the client in loan, credit, or grant terms from IDA sources identified as providing disaster risk management co-benefits, as a share of the total sum approved by the Board. Data reported for this indicator represents the annual average over FY18–20.

|                     |   |
|---------------------|---|
| Unit of Measure     | US\$ billion  |
| Disaggregation      | FCS   |
| Reporting frequency | Annual  |
| Data source         | World Bank staff estimate based on Bank data system |

**27. Private direct mobilization by WBG operations/transactions in IDA countries:** Financing from private entities other than the WBG that becomes available to IDA clients at financial close where WBG is contractually engaged in raising resources. "Private entity" is defined as a legal entity that is: (i) carrying out or is established for business purposes and (ii) financially and managerially autonomous from national or local government. Examples include registered commercial banks, insurance companies, sovereign wealth funds, and other institutional investors investing primarily on a commercial basis. Data is reported for IDA eligible countries, including blend countries, in a reporting FY.

|                     |   |
|---------------------|---|
| Unit of Measure     | US\$ billion                            |
| Disaggregation      | FCS                                     |
| Reporting frequency | Annual                                  |
| Data source         | World Bank staff estimates based on SAP |

17. Syria was added as an IDA eligible country in September 29, 2016 and will be included in the baseline and annual data calculation for IDA18 cycle.

**28. Total private mobilization of WBG-supported operations/transactions in IDA countries:** Investment made by a private entity, where “private entity” is defined as a legal entity that is: (i) carrying out or is established for a business purposes and (ii) financially and managerially autonomous from national or local government. Examples include registered commercial banks, insurance companies, sovereign wealth funds, and other institutional investors investing primarily on a commercial basis. Includes Private Direct Mobilization and Private Indirect Mobilization, which is defined as financing from private entities provided in connection with a specific activity for which WBG is providing financing, and is not playing an active or direct role that leads to the commitment of the private entity’s finance. Private Indirect Mobilization includes sponsor financing if the sponsor qualifies as a private entity. Data is reported for IDA eligible countries, including blend countries, in a reporting FY.

|                     |                |
|---------------------|----------------|
| Unit of Measure     | US\$ billion   |
| Disaggregation      | FCS            |
| Reporting frequency | Annual         |
| Data source         | World Bank SAP |

**29. Number of Illicit Financial Flows Assessments performed in IDA countries:** Illicit Financial Flows (IFF) Assessments encompass the variety of tools the WBG will utilize to help IDA countries to monitor and measure IFFs. These include Rapid Assessment Tools (RAT), Tax Administration Diagnostic Assessment Tool (TADAT), National Risk Assessments (NRA), and other approaches for assessing the different dimensions of IFFs. Assessments will be tracked and registered by the IFFs thematic lead and will report those performed on a yearly basis.

|---------------------|----------------|
| Unit of Measure     | Number         |
| Disaggregation      | FCS            |
| Reporting frequency | Annual         |
| Data source         | World Bank SAP |

**30. Share of IDA18 CPFs which reflect at least one of the following four key principles underpinning economic transformation:**

1. Sectoral productivity
2. Value chain expansion
3. Increased productive capital stock or investment in energy, transport, manufacturing or services
4. Export sector output/value added; trade facilitation
